Dear Harold:

Sorry for the delay, but have been working on an Exhibit as well as a couple of new Canadian leads. You will find enclosed a copy(actually the only copy I have) of Exhibit E, The Harlowbee. This exhibit grew out of the work I did on the exact position of Brannan a few months back. I had the idea kicking around in my mind for quite a while but didn't have the time to sit down and get it done until just lately.

The exhibit contains the work I previously sent you on Brannan as well as work done on Bums, Norman, Lamar, Williams & others who, through a fraudulent "reconstruction" by the Commission, were placed in a position other than their exact position as proven by the photographic evidence. Since it is my only copy, you may, if you have the facilities at hand, take it apart and copy it for yourself. I used to have free access to a Xerox machine with my previous employer which always enabled me to make other copies of my exhibits. However, since that is none I am at a loss in this regards. It's too bad to as I have had quite a few requests for copies of my exhibits lately. But I usually refer them to others who have both copies of my exhibits and the means of copying them.

No luck with either the book or other employment as of this writing. I took the manuscript to Maclean's magazine as they stated they may be interested in printing an excerpt from the book. No word as yet though. Am keeping my fingers crossed that something will materialize in the near future. We've just got to have those photographs.

I received a copy of the cross-index from Sud Pennerwald. Would like to thank you for giving him my name and suggesting he send me one. It is very useful for analytical purposes. I am already looking into the case of classified CD 1305, and I had interview with Mrs. Lucille Labonte of Sudbury Ont. I have talked to Mrs. Labonte once on the telephone already and her story is just unbelievable. In fact, the FBI told her she was crazy and should be in a Mental Institute. I have sent her some questions which she has promised to answer and will send you her letter when I get it back. Until then I will say no more, as I couldn't begin to tell you what I'm all about. I will leave that for her writing.

I am also enclosing some errors or mistakes that I found in Thompson's book. I believe you asked me once before to find what errors I could, especially in the area of his chart of events. I haven't really studied it too closely yet, but have found a few dozen errors in that chart alone.

Well, I will close for now. Hope to hear from you soon, so, until next time...

Respectfully,
